Summary of Qualifications

- Programming
 - Experienced: C#, .NET
 - Familiar: C, C++, Haskell, Prolog, LISP, Ada, Java
- Web Programming:
 - Experienced:
 - HTML
 - CSS
 - JavaScript
 - Angular.js
 - Backbone.js
 - JQuery
 - ASP.NET
 - XML
- Problem solving through requirements collection, algorithms analysis and solutions design

Professional Experience

United States Marine Corps — Personnel Administration

1999 - 2007

Sergeant (E-5) | 8 years

- Led, mentored, and developed personnel while maintaining accountability for mission-critical administrative operations.
- Managed sensitive personnel information with accuracy, discretion, and attention to policy.
- Coordinated competing priorities and communicated effectively across multiple levels of the organization.
- Completed the Intermediate Leadership Course.

Adecco Technical at HP, Boise, ID

Software Engineer II Test Lead, Core Firmware – Extensibility, Web Services and Web Content

2014 - 2016

- Utilizing C# and .NET
 - Led a test team in bringing test pass rates to a high degree of quality, while ensuring backwards compatibility for new product releases
- Coordinated testing strategies and backwards compatibility verification with numerous Global partners

ArmgaSys Inc., Meridian, ID

Software Developer

2012 - 2014

- Utilized C#, Silverlight 4, WPF-RIA, SQLServer 2008 and Entity Framework to develop the code base for an Interactive Graphical Planning Application, SimNAVY
- Utilized C#, ASP.Net and nHibernate to maintain and develop a Naval Facility Readiness Reporting application
- Utilized C#, JQuery, Javascript and nHibernate to aid in the development of an in house work flow and time management system

Adecco Technical at HP, Boise, ID

Software Engineer II Test Lead, Core Firmware – Web Services

2012

- Led a Global test team in qualifying Web Services for a fleet of business line printer, scanner and multi-function products
- Utilized C# .NET and design patterns to verify a Web Service code base on Microsoft Windows XP and CE product platforms in VMWare, hardware emulation and production device environments
- Reduced the code base and complexity while maintaining code coverage and quality through code reuse, inheritance and polymorphism
- Coordinated test development across Global partners, to ensure a high standard for test passing rates in an aggressive release schedule

- Identified and developed solutions to test environment infrastructure problems in order to increase efficiency and reduce the complexity of test and environment code

Software Engineer I Test, Core Firmware – Web Services

2011 – 2012

- Expanded tools for generating code from XML schemas for use in a proprietary testing environment
- Implemented proprietary testing environment infrastructure for Web Services functionality
- Developed and implemented new strategies for unit and subsystem testing, increasing stability and confidence
- Identified, debugged and reported defects for firmware, test infrastructure and tests; as well as correcting system, subsystem and unit tests in order to reduce the burden on partners
- Implemented coding standards to ensure readability, consistency, and maintainability
- Increased performance, effectiveness and reduced resource usage by identifying redundancies and streamlining Web Services testing

Education and Professional Development

Computer Science, Western Washington University, 2007 - 2010

Associates of Science Computer Science, Skagit Valley College, 2007

Intermediate Leadership Course, USMC, 2004
